

Application Flow Document

This document describes the user journeys and application flows for the SkillConnect JK platform. It outlines how learners, training providers (TPs), banks and administrators interact with the system from onboarding through loan repayment and monitoring. The descriptions serve as guidance for UX designers and developers building the web and mobile interfaces.

1. High-Level Actor Flows

1.1 Learner Journey

A. Onboarding & Course Selection

1. **Language selection:** The learner opens the web or mobile app and selects preferred language (Urdu, Kashmiri, Hindi or English). The selection is saved for subsequent sessions.
2. **Registration & KYC:** The learner registers with phone number and sets a password (or social login). The app prompts Aadhaar eKYC via DigiLocker. In offline mode, the learner visits a Common Service Centre (CSC) or bank branch, where a facilitator assists with KYC uploading.
3. **Profile creation:** The learner fills a profile form with education level, income band and career interests. Optional fields allow listing local constraints (e.g. mobility issues) and support needs.
4. **Course discovery:** The learner browses the course catalogue by sector, mode (online/hybrid/centre), fee, duration and language. Courses include paid TP programmes and curated free resources (YouTube playlists, university lectures). Search suggestions highlight high-demand sectors in the chosen district.
5. **Personalised recommendations:** A recommendation engine suggests courses based on the learner's profile, local job trends and previous learners' outcomes. The learner can accept or explore more options.
6. **Course details view:** When viewing a course, the learner sees curriculum, trainer information, fees, certification requirements, placement statistics, and the dynamic refund guarantee (TPScore percentage). Comparisons with similar courses are available.

B. Loan Application & Approval

1. **Loan eligibility check:** On course selection, the system computes a preliminary Borrower Score and displays the indicative loan amount, interest rate (e.g. MCLR + 1.5 %), moratorium and EMI schedule. Learner can adjust loan size if paying a portion out of pocket.
2. **Application submission:** The learner confirms the loan terms and digitally signs. For offline applicants, the facilitator prints or provides a

digital OTP for consent. The application package includes learner data, course details and TPScore.

3. **Bank underwriting:** The application is sent to the bank via API. The bank system verifies KYC, runs credit checks (via credit bureaus if available), applies CGFSSD guarantee rules and returns a loan decision within minutes/hours.
4. **Approval & account creation:** If approved, the platform notifies the learner with terms. An escrow ledger is opened and disbursement plan is displayed. The learner signs final loan agreement; the system triggers UPI AutoPay e-mandate creation or collects alternative repayment instructions.
5. **Rejection & support:** If rejected, the learner receives a reason (e.g. missing documents, low Borrower Score). They are offered remediation options (submit additional documents, choose a different course, apply with co-applicant) and can re-apply.

C. Training Participation & Monitoring

1. **Course start:** The learner is enrolled once the first tranche is disbursed to the TP. Course materials and schedules appear on the dashboard. Attendance is recorded automatically for online sessions (login logs) or via mobile check-in at physical centres. In offline/hybrid mode, facilitators can upload attendance data.
2. **Progress tracking:** The learner sees progress bars for modules completed, assignments submitted and attendance percentage. The platform sends reminders to maintain attendance above threshold to trigger next disbursement.
3. **Assessment:** At the end of course modules, the learner schedules assessments (online or at a centre). The platform records scores and passes them to the bank and TP. It also computes qualification for certification.
4. **Certification:** Once assessments are passed, the learner receives digital certification via the platform and an entry is logged to trigger the final disbursement to the TP. Certificates are stored in DigiLocker.
5. **Placement assistance:** After certification, the platform suggests local employers or gig opportunities. While placement is not guaranteed, it uses labour market data to recommend potential jobs. If the learner finds employment, they can update employment details (employer, salary), enabling optional salary-linked repayment in future phases.

D. Repayment

1. **EMI schedule:** After the moratorium (course duration + 3 months), the learner receives reminders about upcoming EMIs. Step-up EMI schedule is shown (lower payments in initial six months, higher thereafter).
2. **Automatic deductions:** UPI AutoPay or NACH E-mandate deducts monthly EMI from learner's account. Notifications confirm successful or

failed payments. For feature-phone users, UPI 123PAY interactive voice call collects EMIs.

3. **Delinquency management:** If payment fails, the system notifies learner and triggers a grace period. After repeated failures, the platform may debit the TP guarantee or recover from the first-loss reserve, and reports the default to the bank. Learner is offered restructuring or deferment based on circumstances (e.g. political disruptions).

1.2 Training Provider Flow

1. **TP registration:** TPs apply for platform accreditation by submitting legal documents, past training outcomes and agreeing to deposit a performance guarantee (amount based on dynamic TPScore). The admin panel reviews and approves TPs.
2. **Course creation:** TPs list courses with details (sector, NSQF level, fees, curriculum, trainers). They must provide job demand justification and set refund guarantees (X % for dropouts, Y % for non-certification).
3. **Learner management:** TPs receive notification when a learner enrolls. They can view the escrow ledger and milestone schedule. They record attendance and assessments via the platform or integrate with their LMS.
4. **Milestone requests:** At each milestone (enrolment, progress, assessment, certification), TPs request disbursement by submitting evidence (attendance logs, assessment scores). The platform verifies and releases the tranche.
5. **Guarantee management:** If learners drop out or fail to certify, the platform deducts the corresponding refund from the TP guarantee deposit. TPs can top up the guarantee to maintain operations.
6. **Analytics & improvement:** Dashboards show course performance, dropout rates and refund liabilities. TPs can identify problematic modules and adjust teaching methods.

1.3 Bank Flow

1. **Integration setup:** The bank integrates its loan management system via API. Endpoints include application intake, status update, disbursement triggers and repayment collection.
2. **Loan underwriting:** Bank receives data from platform, runs credit checks, applies CGFSSD guarantee coverage and returns decision. It records guarantee coverage (75 % from CGFSSD, remainder from TP deposit/state first-loss fund).
3. **Disbursement:** On approval, bank disburses funds to the escrow ledger in tranches when the platform sends milestone triggers. Bank accounts are credited accordingly.
4. **Collections:** Bank sets up UPI AutoPay e-mandate and monitors repayments. It receives alerts on default or early repayment. Collections

data flows back into the platform to update Borrower Score and adjust analytics.

5. **Reporting & compliance:** Bank can export aggregated data for PSL reporting[1]. It can monitor default rates, guarantee claims and recovery actions.

1.4 Administrator Flow

1. **TP and course approval:** Admin panel lists pending TP applications and courses. Admin verifies documentation, ensures courses meet accreditation standards and approves or rejects submissions. Admin also sets sector quotas and district targets.
2. **Policy configuration:** Admin configures guarantee percentages, milestone thresholds, interest rate caps and allowed ticket sizes. Settings can be district-specific.
3. **Monitoring:** Admin dashboards aggregate system-wide metrics (enrolment, certification rates, NPA ratio, average Borrower Score). Alerts appear when KPIs deviate from targets. Admin can trigger audits or investigations.
4. **User support & grievances:** Admin oversees dispute resolution; learners or TPs can file grievances (e.g. technical issues, discrimination). Admin tracks and resolves tickets.
5. **Scaling & multi-bank expansion:** Admin can onboard additional banks through the aggregator interface, map standard data fields, assign bank quotas and monitor comparative performance.

2. Sequence Flows & Edge Cases

2.1 Loan Application Sequence

1. Learner selects course and initiates loan application.
2. System collects KYC, calculates Borrower Score, attaches TPScore and sends application to bank API.
3. Bank responds with approval or rejection.
4. On approval, system opens escrow ledger and triggers first disbursement (T0). On rejection, learner receives explanation and may reapply.

Edge Cases: - *Incomplete documents:* The system prompts learner to upload missing documents; application remains pending. - *KYC failure:* eKYC fails due to mismatch; learner is directed to offline KYC at bank branch. - *Bank system unavailable:* The platform queues applications and retries; learners are informed of delays.

2.2 Milestone Verification Sequence

1. TP submits evidence of attendance threshold.
2. System cross-checks with attendance logs and verifies milestone.

3. System triggers next disbursement to escrow; bank releases funds to TP.

Edge Cases: - *False reporting*: Random audits cross-verify evidence; if fraud is detected, TP is penalised (loss of guarantee, suspension). - *Attendance below threshold*: Disbursement is withheld; system sends alerts to learner and TP; remedial actions (make-up classes) may be offered.

2.3 Repayment Sequence

1. Moratorium ends; system notifies learner of EMI start date.
2. EMI is deducted via UPI AutoPay on due date.
3. Successful payments update loan balance; final loan closure triggers certificate release to bank.

Edge Cases: - *Payment failure*: System notifies learner and bank; re-attempts deduction. After repeated failures, TP guarantee or first-loss reserve covers outstanding amount. Collection agencies are not used to avoid coercion. - *Job loss or political disruption*: Learner can request deferment; admin or bank approves pause; interest accrues or is waived based on policy.

3. Offline Assistance Flow

Given J&K's connectivity challenges, the platform supports offline assistance:

1. Learner visits a CSC, training centre or bank branch.
2. Facilitator logs in to the administrative portal and completes registration or loan application on behalf of learner. The app can save data offline and sync when connectivity is restored.
3. Facilitator scans or photographs documents; these are uploaded via the app.
4. Learner receives printed confirmation and SMS/IVR notifications when status updates occur.

4. Multi-Bank Aggregator Flow (Future Expansion)

1. Admin onboards additional banks by registering API endpoints and business rules (interest rates, caps, guarantee requirements).
2. When learners apply for loans, the platform may query multiple banks and return offers. Ranking can be based on interest rates, approval probability and bank quotas.
3. Learner chooses preferred offer; platform sends application to chosen bank's API for final approval. Loans are then managed in the same way as the pilot, with per-bank dashboards.
