

Design & UX Specification

This document provides a comprehensive overview of the visual and interactive design for SkillConnect JK. The objective is to deliver a user experience that is both **institutional** and **community-centric**, ensuring trust and inclusivity for learners, TPs, banks and administrators in Jammu & Kashmir. The design also adapts to a potential public–private partnership tone: neutral towards government and welcoming to the private sector.

1. Design Principles

1. **Trust & Professionalism** – Use clean layouts, ample white space and institutional typography to signal credibility to banks and TPs. Avoid ornamental elements associated with propaganda or any political symbol.
2. **Community Warmth** – Incorporate warm accent colours and friendly illustrations to create a welcoming atmosphere for learners. Imagery should depict diverse J&K youth learning and collaborating, avoiding political connotations.
3. **Multilingual Inclusivity** – All text must support four languages: English, Hindi, Urdu (RTL) and Kashmiri. Provide a language toggle at the top of every page. Use internationalization libraries and appropriate fonts (e.g. Noto Sans family) to ensure legibility.
4. **Accessibility & Usability** – Conform to WCAG 2.1 AA standards: high contrast, scalable fonts, alt text for images, keyboard navigation. Forms are short and split into steps; error messages are clear and actionable.
5. **Responsiveness & Offline Support** – Design must adapt gracefully to mobile, tablet and desktop screens. Key functionality (viewing courses, submitting attendance) must be accessible offline with local caching and asynchronous syncing when connectivity resumes.
6. **Data Density & Clarity** – Dashboards for banks and TPs should present complex data (disbursement status, loan portfolio metrics) in charts and tables that are easy to scan. Use visual hierarchies (e.g. card groupings, progressive disclosure) to prevent cognitive overload.

2. Branding & Visual Identity

2.1 Logo & Tagline

- **Brand Name:** SkillConnect JK
- **Primary Tagline:** *The world of connectivity begins here.*
- **Sub-line (bank-facing):** *A bank-led, outcome-linked skilling finance platform.*

The logo should combine a modern sans-serif wordmark with an abstract symbol representing connection (e.g. interlocking circles or a network node). Avoid using national symbols or religious motifs. The tagline appears below the logo on marketing pages but can be omitted in operational dashboards.

2.2 Colour Palette

- **Primary Colour:** Indigo (#3F51B5) – conveys trust and professionalism.
- **Secondary Colour:** Teal (#009688) – conveys freshness and innovation.
- **Accent Colours:** Warm gold (#FFC107) and soft green (#8BC34A) – used sparingly to highlight actions and success states.
- **Neutral Backgrounds:** Light grey (#F5F5F5) and white (#FFFFFF).

2.3 Typography

- **Headings:** Montserrat or Noto Sans Bold (for Arabic script). Large headings (32 px) and subheadings (24 px) establish hierarchy.
- **Body Text:** Noto Sans Regular (16 px). For Urdu, use Noto Naskh Arabic. For Kashmiri (Sharada script optional), fallback to Noto Sans or applicable font.
- **Buttons & Links:** Semi-bold to improve readability.

2.4 Icons & Illustrations

- Use line icons from the **lucide-react** library for UI elements (e.g. home, profile, settings, loan, progress). Icons should be consistent in stroke weight.
- Illustrations depict generic scenes of studying, collaboration and community, intentionally avoiding political or religious scenes. They can be tinted with accent colours.

3. Layout & Components

3.1 Navigation

- **Top Bar:** Contains logo, tagline, language selector, and user profile icon. When logged in, shows notifications and quick links (dashboard, courses, loans, support).
- **Side Menu** (desktop/tablet): Collapsible vertical menu listing main sections (Home, Browse Courses, My Loans, Progress, Profile). On mobile, a hamburger menu reveals the same items.
- **Breadcrumbs:** Display path within nested pages (e.g. Courses > IT/ITeS > Web Development) to orient users.

3.2 Home Page (Learner)

1. **Welcome Banner:** Highlights tagline and invites user to explore courses. Shows call-to-action buttons (Browse Courses, Apply for Skill Loan).

2. **Recommended Courses Carousel:** Scrollable cards with course titles, brief description, sector icon, and “Apply Loan” button. Includes progress labels if user is already enrolled.
3. **Stat Highlights:** Small cards showing personal metrics (courses in progress, amount disbursed, next EMI due) and system metrics (certification success rate, number of learners funded).
4. **News & Community Section:** Lists upcoming webinars, community events, success stories. Encourages peer learning and mentorship.

3.3 Course Details Page

- **Header:** Course title, sector icon, duration, mode indicator and NSQF level. “Apply Loan” button anchored.
- **Tabs:** Curriculum, Trainer Info, Fees & Financing, Reviews, Outcomes.
- **Curriculum Section:** Expands modules with descriptions. Shows learning hours and prerequisites.
- **Fees & Financing:** Breaks down cost (tuition, materials, assessment). Presents loan simulation widget: user inputs desired loan amount and sees EMI schedule, interest rate and disbursement milestones. Includes guarantee information (TPScore, refund percentages). A call-to-action button triggers loan application process.
- **Reviews & Outcomes:** Displays learner reviews (text only, star ratings) and aggregated placement statistics.

3.4 Loan Application Form

- Multi-step wizard with progress bar (e.g. Step 1: Personal Info; Step 2: Course & Loan Details; Step 3: Documents; Step 4: Review & Submit). Each step includes inline validation and help text.
- Provide estimated time to complete (5–10 minutes). Display security and privacy assurance.
- Ensure forms are mobile-friendly with large tap targets. In offline mode, show “Save & Continue Later” option.

3.5 Dashboard (Learner)

- **Loan Overview Card:** Shows outstanding principal, next EMI date, interest rate and number of tranches disbursed. Includes “View Schedule” button.
- **Progress Section:** Graph or progress bar for current course modules (e.g. 60 % completed). Upcoming assessments dates are listed with action buttons.
- **Notifications:** List of alerts (payment reminders, milestone achievements, messages from TP or bank). Use icons and colour coding for different categories.

- **Action Buttons:** “Upload Attendance”, “Schedule Assessment”, “Update Employment Info”, “Contact Support”.

3.6 Dashboard (TP)

- **Summary Tiles:** Number of active learners, total disbursed amount, certification rate, outstanding guarantee balance.
- **Milestones Table:** Lists each learner, current milestone, expected disbursement date, and status (Pending, Verified, Released). Provides links to submit evidence or view evidence history.
- **Guarantee & Refund Tracker:** Shows guarantee deposit amount, refunds triggered, remaining guarantee. Alerts TPs when deposit falls below minimum.
- **Analytics Charts:** Visualise dropout rates, average assessment scores and placement metrics over time.

3.7 Dashboard (Bank)

- **Loan Portfolio Overview:** Total number of skill loans, amount disbursed, delinquency rate, guarantee coverage. Filter by district, sector, and TP.
- **Loan Pipeline:** Table of applications awaiting decision, underwriting status (auto-decision, manual review). Allows bank officers to drill into individual applications.
- **Repayment Monitoring:** Chart of monthly EMI collection vs. expected; list of delinquent accounts with days past due and next actions. Option to export data for PSL reporting.

3.8 Admin Panel

- **Approvals Queue:** Cards listing pending TPs and courses with approve/reject actions.
- **Configuration Forms:** Set guarantee percentage per sector/district, interest rate caps, milestone thresholds, and pilot districts.
- **System Metrics:** High-level charts on enrolment, certification, NPA ratio and satisfaction scores. Alerts highlight anomalies.
- **User Management:** CRUD (create, read, update, delete) operations on all users (learners, TPs, bankers, facilitators). Ability to reset passwords, deactivate accounts, or grant roles.

4. Interaction & Micro-interactions

- **Button States:** Buttons have default, hover, active and disabled states with subtle drop shadows. Primary actions (e.g. Apply Loan, Submit Evidence) use the primary colour; secondary actions use neutral colours.
- **Form Validation:** Real-time input validation with inline error messages. Fields highlight in red with descriptive error text. Success state shows green checkmarks.

- **Progress Indicators:** Use animated progress bars for course completion and loan application steps. Provide tooltips explaining each step.
- **Notifications:** Toast notifications appear at the bottom for short confirmations (e.g. “Attendance uploaded successfully”). Persistent notifications are accessible via the notification bell icon.
- **Transitions & Animations:** Use **Framer Motion** for smooth page transitions, collapsible sections and modals. Keep animations subtle to maintain professional tone.
- **Accessibility Aids:** Users can increase font size via settings; focus indicators are clearly visible; all interactive elements have ARIA labels.

5. Content Strategy

- **Tone of Voice:** Use simple, empathetic language that avoids jargon. In all languages, adopt a neutral yet optimistic tone. Provide clear instructions and positive reinforcement (“You’re half-way through your course!”).
- **Multilingual Copy:** Work with native translators to ensure idiomatic translations, especially for Kashmiri and Urdu. Store content in a translation management system (e.g. i18n JSON) to allow future updates.
- **Imagery & Stories:** Showcase success stories and testimonials from J&K youth who have completed courses and secured jobs. Use respectful portrait photography or stylised illustrations (no political figures, no ethnic/religious markers).

6. Adaptability & Theme Variations

Given the requirement to be neutral but flexible, design should allow theme variations:

1. **Institutional Mode:** Use primary colours (indigo/teal) predominantly, minimal illustrations. Suitable for bank dashboards and formal communications.
2. **Community Mode:** Increase use of warm accent colours, larger imagery and friendly icons. Suitable for learner onboarding and community events pages.

Design tokens (colours, fonts, spacing) are centrally defined so themes can be switched programmatically.

7. Offline & Low-Bandwidth Design

- Provide low-resolution images and reduce heavy assets; allow learners to download course content in advance and view offline. Use local storage to cache forms and progress data.

- Display offline indicator when connectivity is lost; allow learners to continue filling forms. When connectivity resumes, automatically sync data and notify the user.

8. Security & Privacy UI Considerations

- Inform users when their data (KYC, attendance) is shared with banks and TPs. Provide privacy policy in multiple languages.
- Use secure input controls for sensitive data (e.g. masked password fields, OTP inputs with auto-detect). Avoid asking for unnecessary personal details.
- Indicate secure pages with lock icons and HTTPS badge.

9. Future Extension Points

- **Gamification:** Introduce achievement badges and leaderboards to motivate learners.
 - **Chatbot & AI assistant:** Add an in-app assistant (powered by LLM like LLaMA) to answer learners' questions and provide guidance; design chat interface with clear separation between AI responses and official notifications.
 - **Market & Marketplace:** Provide a micro-storefront for learners who complete courses (e.g. artisans selling handicrafts). Design product cards and purchase flows consistent with the core UI.
-
