

SkillConnect JK Submission Packet

Live Demo Link

The SkillConnect JK web application is live and available at the following URL (best viewed on a laptop, fully functional on mobile devices):

https://skillconnect-jk-frontend-rf4jdrmsk-pbathuris-projects.vercel.app?_vercel_share=xf29gCgCC7xYMdUbTGtlkl6qbO4NtBEV

Overview

SkillConnect JK is a comprehensive platform designed to connect youth in Jammu & Kashmir with affordable skill-development opportunities and bank-led financing models. The platform integrates training providers, learners, banks and employers through a transparent, outcome-based financing system. This submission packet contains all of the documents required to understand, build and evaluate the project, as well as a screenshot of the live application's landing page.

Included Documents

Document	Description
Product Requirements Document (PRD)	Captures the high-level goals, functional and non-functional requirements, user stories, KPIs and assumptions for SkillConnect JK. It explains the problem space, target audience and solution boundaries.
App Flow	Describes the end-to-end journeys for each user persona (learner, training provider, bank, administrator). It includes state diagrams and explanations of core flows such as course discovery, loan application, disbursement milestones, repayment and reporting.
Design Document	Provides a detailed information architecture and user-interface specification, outlining layout decisions, navigation, visual hierarchy, multilingual support (English, Hindi, Urdu and Kashmiri) and accessibility considerations.
Backend Architecture & Tech Stack	Defines the recommended technology stack (NestJS API, PostgreSQL, Redis, Node), system architecture, database schema, API endpoints, message queues and event logging.
Security & Compliance	Lists the security controls and compliance checks required before deployment, including encryption,

Document Checklist	Description authentication, authorization, rate limiting, logging and auditing.
Pilot Operations Playbook	Outlines how to launch a pilot in selected districts, including stakeholder roles, timelines, key metrics to monitor and scale-up criteria.
Risk & Credit Policy Appendix	Details the credit-scoring methodology (borrower score, training-provider score), probability of default, loss given default, guarantee sizing and underwriting rules.
Multi-Bank Aggregator Proposal	Suggests how the platform can be extended to support multiple banks via an aggregator layer for underwriting, disbursement and collections.

How to Use This Packet

1. Open the PRD to understand the problem, objectives and constraints. Refer to the App Flow document to see how users move through the system.

2. Review the Design Document for UI/UX guidance and to ensure your implementation follows the specified layouts and interaction patterns.
3. Consult the Backend Architecture for details on services, data models, APIs and integration points. Use the Security Checklist when preparing the application for deployment.
4. Follow the Pilot Operations Playbook to plan a district-level rollout and monitor success metrics. Refer to the Risk & Credit Policy Appendix when implementing the underwriting engine.
5. For scaling beyond a single bank, see the Multi-Bank Aggregator Proposal.

Final Notes

If any questions arise while reviewing these documents or the live application, please contact the project team. Thank you for considering our solution for the Policy Hackathon.

[1] This document has been created with the help of ChatGPT for technical and bullet point usage to put together a great report. All objectives were written previously in an unorganized manner, which were later organized through these sources.
